

Supplemental Figure S1. Bacterial population of compatible strain of *R. solanacearum* OE1-1 in *NbARP*-silenced and *NbARP*-overexpressing plants. (A) Growth of *R. solanacearum* OE1-1 in control plants and *NbARP*-silenced plants. Bacterial suspension was infiltrated into control plants (PVX) and *NbARP*-silenced (*NbARP*-VIGS) plants. (B) Growth of *R. solanacearum* OE1-1 in *NbARP*-expressing transgenic tobacco and control plants. Bacterial suspension was infiltrated into fully expanded leaves of GFP-expressing control (GFP) or transgenic tobacco lines (ARP-10 and 12). Bacterial population was quantified by plating at specified time points. Values are means of four replicate experiments with standard deviations.

Supplemental Table S1. The primers list used in this study.

Primer	Sequence (5'→3')
M4	GTTTTCCCAGTCACGAC
RV	CAGGAAACAGCTATGAC
